SPEED -SERIES

**There is only one**

There was a need for coming up with a new pad printing machine, the basis of which opens up new target markets for us both technologically and in terms of applications. This has cut down flat-bed printing's negative distance in performance to rotary printing in terms of part output.

The result: the development of the SPEED 40-2 pad printing machine. Its output: as many as 9,000 cycles/h in continuous run. The production quantity is max. 18,000/h printed parts (single colour with a printed image size of Ø 37 mm). Very high true-to-register printing, precision contours and photo and line images.

The SPEED is a built-in execution, suitable for any kind of clocked, linear or rotary transfer systems. Thanks to its integrable misprint device there is no stopping of the machine in the absence of a workpiece.

The power costs are low in comparison to the cycle number (part output). The SPEED 40-2 is a fast shortstroke machine of a new series of pad printing machines.

No other pad printing machine on the market offers these benefits.

Drive Description	Drive with AC asynchronous motor and resolver, without controller; without connecting cable; without control cabinet	Drive with AC asynchronous motor and frequency converter; connecting cable (5 m) with plug connection at the machine; with control cabinet	Drive with AC asynchronous motor and servo controller; connecting cable (5 m) with plug connection at the machine; without control cabinet	Without motor, externally driven (input shaft gear)

## Scope of supplies:

- Ink/doctoring cups
- Hold-down bridge client-specific version
- Pad bridge client-specific version
- Assembly table
- Gripping tongs
- Printing pads
- Tools and accessories set
- Technical documentation

## Accessories & Options

- Machine stand made of aluminium profiles
- Frame made of steel, closed, with angle table
- Aluminium cross table for the positioning of jigs
- Mounting plate for jig
- Misprint device
- Overhead model
